USDA Advice	Consumers who have purchased these products are urged not to consume them. These products should be thrown away or returned to the place of purchase.
USDA Establishment #	EST. P-244 inside the USDA mark of inspection
Additional Information	<ul style="list-style-type: none">• FSIS and its public health partners, including the Centers for Disease Control and Prevention (CDC), public health and regulatory officials are investigating a multistate outbreak of 28 Salmonella Hadar illnesses in 12 states.• Consumption of food contaminated with Salmonella can cause salmonellosis, one of the most common bacterial foodborne illnesses. The most common symptoms of salmonellosis are diarrhea, abdominal cramps, and fever within 12 to 72 hours after eating the contaminated product. The illness usually lasts 4 to 7 days. Most people recover without treatment. In some persons, however, the diarrhea may be so severe that the patient needs to be hospitalized. Older adults, infants, and persons with weakened immune systems are more likely to develop a severe illness.• A recall was not requested because it is believed that the products are no longer available for consumers to purchase.• FSIS is concerned that some product may be frozen and in consumers' freezers.
